- This electronically generated score card is the official result declared by NTA and does not require any signatures.
- The NTA Score indicates the percentage of candidates that have scored EQUAL TO OR BELOW (same or lower raw marks) candidates. The NTA scores of a Candidate have been calculated as follows:  

$$\frac{100 \times \text{Number of candidates appeared in the examination with raw marks EQUAL TO OR LESS than the candidate}}{\text{Total number of the candidates appeared}}$$

NTA score is not the same as percentage of marks obtained.

2. A National Merit Ranking (All India Rank) has been arrived based on the Marks secured against Total Marks.

I. Student having same Score shall be listed in a chronological (ascending) order as per their date of birth.

II. Candidates having same score would be given the same Merit, and the Merit number would be increased by the same number i.e. if there are two candidates at Merit 2, Merit 3 would not be awarded to the next candidate but Merit 4 would be given.

4. The admission authorities are advised to use score awarded to the students for allotment of seat in the AICTE approved programs along with the other criteria that may exist, as applicable.

5. Candidate's particulars including Category and Person with Disability (PwD) have been indicated as mentioned by the candidate in the online application form.

6. Instances of incorrect information provided by the candidates, if detected at any stage, would make the candidate liable for de-qualification.

4 )  Lipid A

**Explanation :** A gram positive bacterium contains lipid A. Gram staining (discovered by H.C. Gram) consists of steps. A heat fix smear is stained with basic purple dye usually crystal violet (Primary stain) After short time, the dyed smear wash off & the smear is covered with iodine. (Crystal violet+ iodine=Gram stain) The smear is washed with alcohol or alcohol-acetone solution (Decolorizing solution) The alcohol is rinsed off & smear is then stained with safranin red (Secondary dye). The bacteria which get purple stain are said to be gram positive & bacteria which get red color are said to be gram negative. Gram positive bacteria have many layers of peptidoglycon (40-90%) & less quantity of lipid. Gram positive bacteria in addition contains lipoteichoic acid (Spanning the peptidoglycon layer & linked to plasma membrane) & wall teichoic acid (linked to peptidoglycon) Alcohol can not wash out primary stain because cannot get entry because of thick peptidoglycane layer. Gram negative bacteria contain 5-1

Biological & pharmaceutical that are relatively unstable in aqueous solution can be processed. 2. Biological & pharmaceutical which can not tolerate high temp can be dried. 3.

The freeze dried products are often more soluble & more rapidly soluble dispersion are stabilized for the shelf life. Disadvantage: Freeze drying process is very expensive & process times are often long. 1. Freeze an aqueous product at a temperature below its eutectic temperature 2. Evacuating the chamber usually below 0.1 torr (100?m Hg) 3. subliming ice onto a cold, condensing surface being within the chamber or in a connecting chamber. 4.

ISO 9001 is the international standard that specifies requirements for a quality management system (QMS). Organizations use the standard to demonstrate the ability to consistently provide products and services that meet customer and regulatory requirements. It is the most popular standard in the ISO 9000 series and the only standard in the series to which organizations can certify.

ISO 9001 was first published in 1987 by the International Organization for Standardization (ISO), an international agency composed of the national standards bodies of more than 160 countries. The current version of ISO 9001 was released in September 2015.

WHO SHOULD USE THE ISO 9001:2015 – QUALITY MANAGEMENT SYSTEMS REVISION?

ISO 9001:2015 applies to any organization, regardless of size or industry. More than one million organizations from more than 160 countries have applied the ISO 9001 standard requirements to their quality management systems.

Organizations of all types and sizes find that using the ISO 9001 standard helps them:

- Organize processes
- Improve the efficiency of processes
- Continually improve

All organizations that use ISO 9001 are encouraged to transition to ISO 9001:2015 as soon as possible. This includes not only organizations that are certified to ISO 9001:2008, but also any organizations involved in training or certifying others.

At last vote of thanks was given by Prof. G. R. Sakhare, in which on behalf of R.J.S.P.M.'s Institute of Pharmacy he thanked him for the expert guidance he has provided.
